

Reverse Osmosis Water Purification Systems

- ✓ *Bio-Natural Alkali Calcium Ionized Pure drinking water*
- ✓ *Healthy PH Alkaline (8 - 9.5)*
- ✓ *Reduce costs and helps the environment by reducing plastic waste and recycling*
- ✓ *Optimal use for coffee, tea, syrups, sparkling water, juices, cooking, ice cubes*
- ✓ *Klarity provides a quality service of a complete product delivered and installed*
- ✓ *Filters are long lasting and economical*

Klarity supplies to the Swiss-French region an affordable and easy to maintain Reverse Osmosis water purification system which produces instant healthy and pure drinking water installed in your home or small office kitchen.

What is Reverse Osmosis (RO) filtration?

Reverse Osmosis (RO) is a natural filtration process that was first used in 1949 for desalination (purifying saltwater to drinkable water). The **Klarity** RO systems combine mechanical filtration with carbon absorption and membrane separation to remove dissolved solids at the ionic level down to 0.0001 microns providing the most optimal drinking water.

Why is RO water better than Swiss tap water?

Our local tap water is considered good and drinkable (most fountains offer potable water!). However the ability to control the hundreds of natural water sources from the direct and indirect pollutants (chemicals, pesticides, bacteria, mould, medical residues, toxic metals, etc.) is overwhelming with limited public information available.

Both The **Klarity KRO-6A** and **KRO-5 Portable** units naturally remove 99.9% dissolved solids like harmful chemical contaminants, toxic metals, and bacteria to provide pure and healthy drinking water.

Choose which model best suits your home or small office:

The Klarity KRO-6A – A 6-stage RO unit for under the sink and includes an **Alkaline filter** which supplements healthy minerals (ionized calcium, magnesium, sodium, potassium) to maintain a healthy pH level value of 8.00~9.50

The Klarity KRO-5 Portable – A 5-stage RO portable unit that can be installed anywhere there is a water source. The unit has two parts so that the top section is portable (17 liter capacity) and can be fitted on to an existing water cooler or transported anywhere.

Klarity KRO-6A

Total Weight: 12kg

Klarity KRO-5 Portable

Total Weight: 12,5kg
